

The Jalasoft Smart Management Pack for Cisco VPN Concentrators delivers enterprise ready monitoring of your network environment. You can monitor your network proactively and be aware of any potential problems that might occur, verify the status of your interfaces and ports, CPU load, traffic and much more. All information is forwarded efficiently to Microsoft System Center Operations Manager 2007 which creates a one stop interface to see the status of your servers and network infrastructure.

Alerts and performance data are visible in **OpsMgr 2007** and will help you take action and prevent any downtime.

A large number of **pre-defined** rules are provided with the Jalasoft Smart Management Pack for Cisco VPN Concentrators. Installation is quick and simple and starting to monitor your network is just a matter of dragging and dropping the rules on the specific devices.

This is made possible through the use of Xian Network Manager Io, the platform that runs the Smart Management Pack; no complicated programming or scripting is needed. You can also configure syslog filters to forward syslog alerts to OpsMgr 2007 and monitor single interfaces as an object, simplifying the monitoring of devices with distributed applications.

In order to analyze the behavior of the network device for a long period of time, the Cisco VPN Concentrators Smart Management

Pack has a set of reports that can be executed from the OpsMgr 2007 Reporting Console.

Rule Parameters

An easy wizard lets you configure the rule parameters. All rules have by default three steps: rule parameters, active rule options and schedule.

Parameters

You can configure when an alert will be sent to OpsMgr 2007. In many cases, this will be when the value is over or under a certain threshold.

However, for status based rules you can choose to generate an alert when the status changes or when it becomes a certain value (e.g. interface operational status: up, down, testing, unknown, or dormant).

For those rules related to interfaces, it is possible to select the interfaces where you want to apply the rule and define their individual thresholds. This way you can fine-tune the Xian environment.

Active rule options

The severity level is sent to OpsMgr 2007 when a rule meets the selected criteria. OpsMgr 2007 organizes the alerts by severity. With this option you can predefine each alert with a different level of severity (debug, informational, warning, error or critical), define the collection of performance counters to be used in performance data views or Xian Reports, rename the rule, and enable debug mode for the active rule.

Schedule

You can set the interval between each execution of the rule. This can vary within a range of seconds, minutes or days. When setting this step take into account that a short interval will consume more system resources.

- Incoming segments
- Incoming traffic
- Interface operational status
- Outgoing discarded packets
- Outgoing error packets
- Outgoing segments
- Outgoing traffic
- Reassembly requests
- Total discarded packets
- Total error packets
- Total segments
- Total traffic

Fans

- Fan speed

Sessions

- Session connection time
- Session incoming traffic
- Session outgoing traffic
- Session status
- Session total traffic

Supported Models

Rules

The Xian Io Smart Management Pack for Cisco VPN Concentrators supports almost all types of the Cisco VPN Concentrators Series. If you want to obtain the updated list of supported devices or if you are interested in adding support for new models, please write to techsupport@jalasoft.com.

Cisco VPN Concentrators performance and status rules¹

General

- Active LAN to LAN session count
- Active management session count
- Active remote access session count
- Active session count
- Attempt failed TCP connections
- CPU load
- Device availability
- Established TCP connections
- Expansion card operational status
- Open active TCP connections
- Open TCP connections
- System uptime
- Throughput
- UDP open ports

Interfaces

- Failed reassembly requests
- Fragmentation failed
- Fragments created
- Incoming discarded packets
- Incoming error packets

¹ Some rules may not be applicable to specific device models.

System Requirements

Minimum requirements to install Xian Io Smart Management Pack for Cisco VPN Concentrators for Microsoft System Center Operations Manager 2007 are:

- Xian Network Manager Io Platform
- Microsoft Windows Server 2003 SP1 or higher
- Microsoft SQL Server 2000 SP4 or Microsoft SQL Server 2005 SP1 or higher
- Microsoft .NET Framework 3.0.
- MDAC 2.8 SP1 or higher
- SNMP connectivity to all managed devices
- Microsoft System Center Operations Manager 2007
- MS Messaging Queuing
- SQL Server Reporting Services 2005
- Operations Manager Reporting 2007
